

Mechanical Engineer
Teck Highland Valley Copper
Posting Date: XXXX 2022

Closing Date: XXXX 2022

Reporting to the Sr Reliability Engineering Supervisor, the Mechanical Engineer is responsible for supporting the engineering needs of plant operations and managing various projects to increase the efficiency and utilization of processing assets at the Highland Valley Copper site.

To be successful, we are looking for someone with strong verbal and written communication, as well as excellent interpersonal and problem-solving abilities; a team-oriented individual with a strong focus on safety, personal responsibility, and who is highly self-motivated. The ability to maintain a positive and flexible attitude while working independently in a fast-paced and dynamic environment is vital in this role.

Join us in the Highland Valley and enjoy a variety of recreational opportunities, such as hiking, skiing, fishing, and golf! The mine site is a 50-minute drive from Kamloops, B.C. which provides all of the comforts of city living. We are also close to Merritt, Ashcroft, and Logan Lake, which all exude a small-town community atmosphere.

Responsibilities:

- Be a courageous safety leader, adhere to and sponsor safety and environmental rules and procedures
- Identify, scope and deliver capital projects, improving the effectiveness of plant assets
- Assist trades persons and operators in troubleshooting mechanical systems identified in plant assets
- Participate in reviews for asset maintenance requirements
- Aid in planning, organizing, securing, and managing of resources
- Establish project objectives and performance measures, and develop corrective plans to ensure project sustainability
- Control project costs and schedule and provide accurate reporting throughout all project phases
- Coordinate with stakeholders within management and operational teams, and ensure that key information is communicated effectively
- Improve project delivery continually by applying relevant lessons learned and maintaining detailed records
- Look for and drive continuous improvement ideas including areas focused on technology and innovation
- Contribute to the overall efficiency of the maintenance department by performing other technical functions as assigned
- Drive various Reliability programs including the principles of predictive and preventative maintenance

Qualifications:

- Bachelor's degree in Mechanical Engineering or a related field
- Eligible for registration as a P.Eng with the Engineers and Geoscientists of British Columbia (EGBC)

- Relevant experience in a processing or manufacturing environment, mechanical and electrical systems, or related industry fields
- Previous experience in mineral processing is an asset

At Teck, we value diversity. Our teams work collaboratively and respect each person's unique perspective and contribution.

Qualified applicants interested in joining a dynamic team are encouraged to submit a resume and cover letter electronically.

We wish to thank all applicants for their interest and effort in applying for the position; however, only candidates selected for interviews will be contacted.

Teck is a diversified resource company committed to responsible mining and mineral development with major business units focused on copper, steelmaking coal and zinc, as well as investments in energy assets.

Headquartered in Vancouver, Canada, its shares are listed on the Toronto Stock Exchange under the symbols TECK.A and TECK.B and the New York Stock Exchange under the symbol TECK.
